BigKeys Plus

The large keys and simple layout of the BigKeys Plus keyboard help users explore letters and words without confusion. The simplified key set avoids ambiguity and deflects interference with the computer. Not only is this ideal for early learners of all ages but also can be of great assistance with dyslexia and related learning difficulties.

BigKeys Plus works straight out of the box - no software is needed! Just plug it into the keyboard socket of your computer.

The arrow keys are separate - a great boon for multiple-choice software. The keys are one inch square, four times the size of standard keys. This makes them easy to see, find, read, and press.

BigKeys Plus is available with a variety of key options, enabling you to find the perfect solution to your needs. It can be configured with either the standard QWERTY keyboard layout (as found on most keyboards) or the simpler ABC layout, ideal for newcomers to computers or dyslexics.

There is also the option of having either lower case or upper case letter keys. The lower case keys are less confusing for children or slow learners.

The keys are available with black lettering on white keys, or black lettering on assorted brightly coloured keys. The high contrast black-on-white option is ideal for users with a visual impairment, while the coloured version appeals to children.

Ordering Information

	BigKeys Plus QWERTY Uppercase (White Version)	K-BK-QW-P	£109.95

BigKeys LX

The traditional BigKeys Plus keyboard continues to be a firm favourite for early learners, while the LX has been designed for more advanced users. With additional punctuation and a separate shift key, the LX is a natural choice for users who need the full range of keys for writing letters, email, spreadsheets and other text entry.

The BigKeys LX is available in both QWERTY and ABC layouts, with high contrasting black lettering on bright white large keys. The large keys are 4 times the size of those on a standard keyboard, making it particularly suitable for users with a visual impairment or hand tremor.

The clever design means that the BigKeys LX takes up the same desk space as a standard keyboard, yet the key tops are 4 times the area. The black lettering is 10 times as big as those on a standard keyboard, which means that the

keys are easy to see, find, read and press.

Ordering Information

Product	Product Description	Product Code	Price (ex. VAT)
	BigKeys LX ABC Lowercase (Coloured Version)	K-LXACLC	£144.95
	BigKeys LX QWERTY Lowercase (Coloured Version)	K-BK-QC-LC	£144.95

BigKeys Keytops

If you have a BigKeys keyboard and wish to change it to lower case, or change the colour, then buy one of these packs.

These keytops are available in black letters on white keytops, or black letters on assorted coloured keytops; and in lower case. The full alphabet is included, but not any of the other BigKeys keys.

A free keytop puller is also included; this enables you to change the keys of the BigKeys Keyboard with ease.

Alternatively, obtain your desired keytops ready-fitted on a BigKeys Plus or BigKeys LX.

Please note that the white lettering on black keytop keys found on the BigKeys LX BlackKeys cannot be bought separately; this is because *all* of the keytops on this keyboard are black, not just the alphabetic keys.

Features:

- Conforms with Nursery, Foundation and Keystage 1 Curriculum requirements
- Black-on-white or colour keytops
- Lower case keytops
- Suitable for ABC or QWERTY
- Fits all models of BigKeys keyboards
- Easy to fit and hard wearing
- Free dual keycap puller

HelpiKeys

HelpiKeys is a new programmable alternative keyboard designed to meet learning needs and physical, visual, or cognitive disabilities.

Simply changing the overlay sheet can change the keyboard's layout. Five standard layout sheets are included, and bundled with the keyboard is the Helpikeys Layout Builder software, which allows you to design and print your own keyboard layouts.

The keyboard can memorize five personalised layouts in its own memory, so your custom layouts can be used on any computer.

An additional configuration settings layout allows you to personalize the response rate, the repeat rate and other keyboard characteristics.

The Helpikeys also includes a programmable five-switch interface that can be used for mouse control.

Features:

- Dimensions: 460 x 370 x 25 mm.
- A3 size layout.
- 5 standard layouts included (QWERTY, ABC, Mouse, Numbers, Yes/No) plus configuration settings layout.
- Layout Builder software included to design your own keyboards.
- 5 programmable switch interface.
- USB and PS2 cable.
- Suitable for any version of Windows.
- No driver necessary.

Anir Ergonomic Mouse

A mouse that really helps RSI

This Ergonomic Mouse has been designed to help avoid repetitive strain injuries (RSI) and give relief to those already suffering. Although it looks like a joystick, it is in fact a conventional ball mouse, which you hold vertically - the shape of this Scandinavian design gives the user a new way of operating a mouse.

With the Anir mouse, the hand remains vertical, and the 'rocker-style' mouse button on top fall naturally under the thumb. Rocking the thumb downwards produces the left mouse-click. Rocking upwards produces the right-click.

The Anir comes in two sizes - medium, suitable for most users, and large, for the larger hand.

The Special 'Pro' version has a button under the index finger, to provide a scroll-function.

The whole manner of operation of the Anir means that strain on the wrist and lower arm muscles is considerably reduced. An excellent companion to any of our range of ergonomic keyboards, for example the Goldtouch Adjustable Keyboard.

Optical Pro

The Optical Pro version of the Anir mouse comes with high-resolution optical technology for precise control; no mouse ball is involved, reducing the need for cleaning and mechanical failure. It also has a button under the index finger, to provide a scroll-function. It is also available in medium and large sizes.

BIG Track

Originally designed for kids, this trackball has a number of features, which make it a valuable tool for users who lack fine motor skills, which a regular mouse requires.

Indeed, this ball is so tough; it can stand up to the rigours of foot or elbow operation. And because of its size, it doesn't require finger control - a swipe at the ball, and a thump on the buttons, works just as well.

The BIG Track comes with PS2 and USB connections.

Now available!

USB and PS2 connections

Plug and go - will work instantly (USB), no drivers needed

Design suitable for desk-top or lap

Sustains rough handling

Large yellow ball, helpful where fine motor skills are absent

Co-exists with other mice for shared equipment

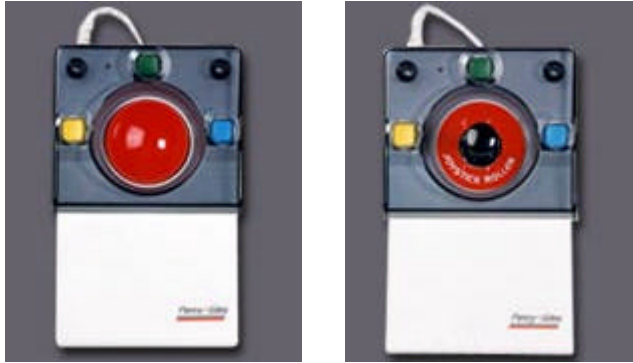

Two mouse buttons

High contrast colours aid and attract users

Micro Optical Mouse

The Micro Mouse is a truly tiny mouse - at only three and a half centimetres wide and eight centimetres long. This makes it ideal for notebook users, or users with small hands such as children.

The Micro Mouse has the advantage of optical sensor technology - this does away with the mouse ball, meaning it keeps cleaner, and the ball cannot be lost!

It also features a scrolling wheel.

Features:

- Very compact
- Optical sensory technology - no ball
- Scroll wheel
- 3 buttons
- USB connection
- For right and left hand users
- Ideal for notebook users and travellers
- Free protective carry bag included
- Fully windows Plug & Play - no driver installation
- Product size (HxWxD): 34 x 33 x 83 mm
- Gross weight: 50 grams
- Windows PC compatible with USB
- Mac compatible (1 button only) with USB

Mini Scroll Mouse	M-MM-SRL	£15.95

Whale Mouse

This larger sized, flatter, adjustable mouse has a built-in contoured palm rest, which encourages neutral wrist, hand and finger positions. The Whale-mouse promotes the use of the larger and stronger arm muscles allowing the smaller muscles of the fingers to rest and relax while it is being used. Because it adjusts in length by up to 1.5 inches, the Whale Mouse fits any hand size. And because it is symmetrical, it is perfect for left or right-handed use.

Expands from 6" to 7.5" to fit the contour of any sized palm

Features:

- Supports fingers off the desktop, reducing strain
- Extends by 1.5 inches for longer hands (6" to 7.5")
- Contoured palm-rest supports hand
- USB and PS/2 connectors

My-T-Mouse Software

Keyboarding with a mouse

My-T-Mouse provides a total alternative to the keyboard. The usual mouse, trackball or other switch input device is harnessed to provide access to an on-screen keyboard layout, and a simplified keyboard input.

My-T-Mouse turns mouse actions into keyboard actions, 25 keyboard layouts are offered each in various sizes and colours - variants include

QWERTY, ABC, and Dvorak.

Unlimited macros can be created on separate Macro Panels. A pop-up calculator is included - with till-roll so you can check as you go!

Includes Tutorial and Quick Help Panel.

For any PC-compatible programs using Windows 3.1, or Windows 95, 98 and ME. Demo available.

My-T-Mouse software provides on-screen keyboards, user programmable macro buttons, and many other innovative interface approaches to enhance operation within the Microsoft Windows Environment.

My-T-Mouse is a Windows software program that provides a various utilities and functions, creating a powerful interface compatible with any pointing device (Mice, Trackballs, Touch-screens, Glide Pads, Pens, Switches (when used in conjunction with switch scanning software), Digitisers, etc.), while providing complete access and control over all computer functions.

My-T-Mouse uses a concept found in fighter planes, helicopters, tanks, and automobiles. That concept is called 'Heads Up Display' technology and its principal objective is to keep the user's focus and concentration centred in one place. My-T-Mouse uses that concept to reduce the visual re-focusing and re-positioning, caused by the heads up and down motion of going from screen to keyboard to screen, and the resulting confusion it causes.

25 'Heads-Up Display' Keyboards in 12 different sizes; ABCD Alphabetical, QWERTY, 3 DVORAKs, and 20 International (German, Spanish, French, etc.) with separate Edit and Numeric panels.

My-T-Mouse products have over 125 functions on 11 sliding panels in 12 screen sizes. Any panel grouping can be selected at any time. It remains active as a Button on the active application and runs under Windows 98/95/3.1, Workgroups, and OS/2 for Windows using minimal Windows Resources.

Minimize Keystrokes, Mouse Clicks and Menu Selections

Store up to 2000 keystrokes/menu selections (or the applications macro scripts) on each button. Up to 15 buttons can be grouped on individual Panels, which auto-open when their assigned application becomes active.

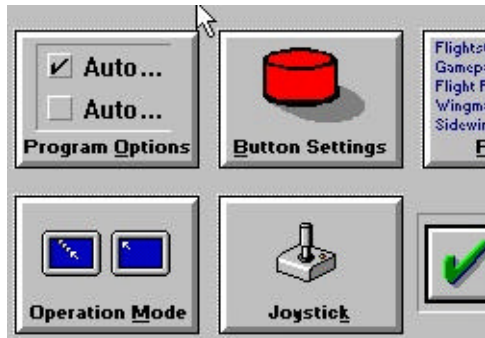

Assignable Functions for Pointing Device Buttons

Assign any of 63 different functions to each button. Popular keys such as Shift, Esc, Enter, Ins, Ctrl, etc, can be assigned at anytime.

Pop-Up Calculator with pop-up Tape and Send Function

A standard 4-function calculator with memory that always stays on top has its own pop-up Tape and Send function that places the display information right into your current document or field.

Joystick-to-Mouse

Make any joystick operate like a mouse

Joystick-to-Mouse software turns any joystick into a point and click mouse to run Window applications. It can also run at the same time as your mouse as there is no need to re-set the software.

Joystick-to-Mouse can be set to remember four joystick functions automatically. Ideal for people who can't use a mouse, trackball, or other pointing devices.

Features:

- Supports any joystick or equivalent
- User controllable speed and sensitivity.
- Option to speed up working in Windows.
- Sounds give aural feedback.
- For Windows 95, 98, ME, NT, 2000, XP versions

IMG Joystick to Mouse Software	S-JTM	£89.95

Lunar Screen Magnifier

Lunar magnifier software is designed for the visually impaired and will enlarge everything on the screen, text, icons and menus. This customisable package will allow you to magnify by up to 32 times with a choice of screen magnification styles: whole screen; split screen; window; lens; auto lens and hooked areas.

Key Benefits:

- Text and images are smooth and clear up to 32 times enlargement.
- Control of colour, contrast and brightness.
- Choice of high visibility mouse pointers.
- Smooth scrolling for browsing long documents.
- Choice of screen magnification styles: whole screen; split screen; window; lens; auto lens and hooked areas.
- Set up the screen exactly according to your requirements or swap easily between screen views.

HAL Screen Reader

HAL Screen Reader provides intelligent access to the latest IT applications through speech and Braille for the visually impaired.

Key Benefits:

Speech

- Easy browsing of Internet web pages and other applications with the Dolphin Virtual Focus even where there is little or no keyboard access.
- Comprehensive online and context sensitive help.
- Reads or spells out any text on screen: documents, menus, web pages, e-mails.
- Reads icons and Internet graphics labels and announces font and style information.
- Talks as you type, by character, by word or both.
- Works with any font, including accented characters and symbols.
- Choice of two software speech synthesizers: Dolphin Orpheus Speech System and Microsoft's MSAPI Speech Synthesizer.
- Orpheus' intelligent pronunciation recognizes similar words by context.
- Choice of nine Orpheus voices or create your own.
- Choice of 9 Orpheus languages including: English (US and UK), Danish, Dutch, Finnish, French, German, Greek, Italian, Norwegian, Spanish (Latin and Castilian) and Swedish. New languages are being added all the time.
- Automatically recognizes many other hardware and software synthesizers.

Braille

- Fast and responsive Braille output.
- Text and graphical information at your fingertips.
- Choose computer or literary Braille (Grade 1 or Grade 2).
- Works automatically with a wide range of Braille displays and note takers.
- Accurate information on formatting, style and physical layout.
- Intelligently reads ahead so dialog information is conveyed in context.
- Programmable Braille hot keys speed up and facilitate operation.

Supernova Reader Magnifier

Supernova Reader Magnifier is unique in the access aid market because it combines magnification, speech and Braille output in a single program. This benefits both individuals and establishments alike, meeting a range of user requirements.

This customisable package will allow you to magnify by up to 32 times in a choice of screen magnification styles: whole screen; split screen; window; lens; auto lens and hooked areas.

Combined with speech synthesis and Braille output makes Supernova the complete access package for the visually impaired.

Key Benefits:

Magnification

- Text and images are smooth and clear up to 32 times enlargement.
- Control of colour, contrast and brightness.
- Choice of high visibility mouse pointers.
- Smooth scrolling for browsing long documents.
- Synchronized Document Read highlights each word as spoken.
- Choice of screen magnification styles: whole screen; split screen; window; lens; auto lens and hooked areas.
- Set up the screen exactly according to your requirements or swap easily between screen views.

Speech

- Easy browsing of Internet web pages and other applications with the Dolphin Virtual Focus even where there is little or no keyboard access.
- Comprehensive online and context sensitive help.
- Reads or spells out any text on screen: documents, menus, web pages, e-mails.
- Reads icons and Internet graphics labels and announces font and style information.
- Talks as you type, by character, by word or both.
- Works with any font, including accented characters and symbols.
- Choice of two software speech synthesizers: Dolphin Orpheus Speech System and Microsoft's MSAPI Speech Synthesizer.
